#### **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

Cambridge International Advanced Subsidiary and Advanced Level

# MARK SCHEME for the May/June 2015 series

# 9608 COMPUTER SCIENCE

9608/21

Paper 2 (Written Paper), maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2015 series for most Cambridge IGCSE®, Cambridge International A and AS Level components and some Cambridge O Level components.

1 (a)

Identifier	Data Type	Description
RaceHours	INTEGER	The hours part of the race time
RaceMinutes	INTEGER	the minute part of the race time
RaceSeconds	INTEGER // REAL	the seconds part of the race time
RaceTime	INTEGER // REAL	the race time in seconds

 $3 \times (\text{meaningful name + data type})$ 

[3]

(b) (i)

Identifier	Data Type	Description
PersonalBestTime	INTEGER/REAL	Personal best time in seconds

meaningful name + data type

[1]

# (ii) Mark as follows:

- Declarations/comments for variables at least 2
- Input (+ prompts) for hours, minutes, seconds
- Input (+ prompt) of personal best time
- Correct calculation of RaceTimeInSeconds (don't allow use of 'x' for '\*')
- Output RaceTimeInSeconds
- Correct logic and output message for < personal best</li>
- Correct logic and output message for > personal best
- Correct logic and output message for = personal best

[max 7]

- (c) (i) Choosing data/values...
  - Test every possible 'logic path' through the code
     // with knowledge of the structure/code

Ignore any reference to normal/boundary/extreme ...

[2]

- (ii) PersonalBest column labelled
  - Test number 1 message: "Equals personal best time"/or similar
  - Test 2/Test 3 data for better performance ...
  - Described with suitable message
  - Test 2/Test 3 data for worse performance ...
  - Described with suitable message

[6]

# 2 (a) (i) Displays the menu (choices)

Repeats the prompt and input ...

...the input is a number between 1 and 4 // Checks number is between 1 and 4

"within range" is not enough

[3]

(ii) ...the input number is validated

[1]

(b) (i)	3			[1]

(ii) Previous design repeated indefinitely // (new design) limits number of attempts

Penalise "Program terminates/closes"

[1]

(c)	ΙF	Choice	=	1	THEN	(CALL)	ReadFile	(1)
	IF	Choice	=	2	THEN	OUTPUT	"Add Customer code"	(1)
	IF	Choice	=	3	THEN	OUTPUT	"Search Customer code"	(1)
	ΙF	Choice	=	4	THEN	END		(1)

#### alternative answer:

#### mark as follows:

CASE OF Choice // Select CASE Choice	1 mark
1: (CALL) ReadFile	1 mark (allow CASE = 1)
2: OUTPUT "Add Customer code"	1 mark
3: OUTPUT "Search Customer code"	1 mark
4: END	
ENDCASE	

Output strings must match

[max 3]

- (d) Mark as follows:
  - Choice / NoOfAttempts declared/commented <u>as integer</u>
     Must appear within the 'main' program
     Allow: different identifier names
  - Constant i assigned a value 3
  - There is an 'outer' loop to repeatedly display the menu
  - Input 'choice' variable
  - Three IF statements (or equivalent) for processing menu choices 1, 2 and 3 Note: they must be correctly formed as 'nested' or 'independent'
  - Choice 1 calls procedure ReadFile
  - Choice 2 outputs "Add Customer Code"
     + Choice 3 outputs "Search Customer Code"
  - Outer loop terminates correctly with 'Choice = 4' //or equivalent
  - Procedure DisplayMenu shows the four menu options
  - Procedure ReadFile is present ...
     and contains a single output message 'Read file code'

[max 8]

# (e) (i) Sensible Identifier + Data Type + Description (1 + 1 + 1)

#### For example:

ThisDate	STRING/DATE	date 'entered by user'
Found	BOOLEAN	flag to indicate ThisDate is 'present in the
		file'
NextLine	STRING	a single line 'from the text file'
NextDate	STRING/DATE	date 'from next line in the file'
NextDiscount	STRING	the discount value from NextLine
ThisMonth	INTEGER	the month part of the date (input or from file)
MyStreamReader	STREAMREADER	references DISCOUNT_DATES file

# Reject 'generic' reserved words

Allow **one** instance variable to store output string(s)

Allow one instance of month/day/year number e.g. ThisMonth shown above [3]

# (ii) Mark as follows:

Open file statement File read statement for line text - NextLine File close statement	(1) (1) (1)
Input of the required date — ThisDate	(1)
<pre>Isolate NextDate from NextLine Isolate NextDiscount from NextLine</pre>	(1) (1)
IF statement comparing the two dates Uses Boolean variable Found to flag when found	(1) (1)
Post/pre condition loop iterate through the file Test for EOF or 'found'	(1) (1)
Note: These must follow some correct logic to score Output 'No discount on this date' <b>and</b> Output 'This is a discount date') Output (when date not found) 'Date not found'	(1) (1)
Accept 'any' identifier names	[max 7]
