

## **Cambridge International Examinations**

Cambridge International Advanced Subsidiary and Advanced Level

CANDIDATE NAME					
CENTRE NUMBER		CANDIE NUMBE	I		

### **COMPUTER SCIENCE**

9608/13

Paper 1 Theory Fundamentals

May/June 2016

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

No calculators allowed.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The maximum number of marks is 75.

Des	cribe <b>two</b> differences between a compiler and interpreter.
1	
2	
•••••	
(a)	Convert the following 8-bit binary integer into denary.
	01001101
	01001101
(b)	Convert the following denary number into Binary Coded Decimal (BCD).
(6)	Convert the following dentity flumber into Bindry Coded Beenmar (BOB).
	82
(c)	Convert the following two's complement integer number into denary.
	11001011
(d)	Convert the following denary number into hexadecimal. Show your working.
	198
	I 9 O

3

A company needs new software to manage its accounts. It is evaluating two different options. One

opt	ion is open source software and the other is commercial software.	
(a)	Explain what is meant by open source software.	
	[	2
(b)		_
(D)	Explain what is meant by commercial software.	
	[	2
(c)	The company has decided to purchase commercial software.	
	Identify <b>four</b> benefits to the company in choosing the commercial software option.	
	1

	[	4

Question 4 begins on page 5.

4 The table shows assembly language instructions for a processor which has one general purpose register, the Accumulator (ACC) and an index register (IX).

Instruction		Explanation
Op code	Operand	
LDD	<address></address>	Direct addressing. Load the contents of the given address to ACC.
LDX	<address></address>	Indexed addressing. Form the address from <address> + the contents of the index register. Copy the contents of this calculated address to ACC.</address>
STO	<address></address>	Store contents of ACC at the given address.
ADD	<address></address>	Add the contents of the given address to ACC.
INC	<register></register>	Add 1 to the contents of the register (ACC or IX).
DEC	<register></register>	Subtract 1 from the contents of the register (ACC or IX).
CMP	<address></address>	Compare contents of ACC with contents of <address>.</address>
JPE	<address></address>	Following a compare instruction, jump to <address> if the compare was True.</address>
JPN	<address></address>	Following a compare instruction, jump to <address> if the compare was False.</address>
JMP	<address></address>	Jump to the given address.
OUT		Output to screen the character whose ASCII value is stored in ACC.
END		Return control to the operating system.

The diagram shows the contents of the index register:

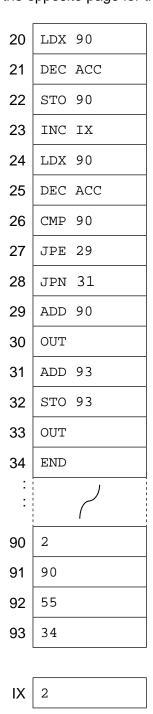

Index register: 1	1	0	0	1	1	0	1
-------------------	---	---	---	---	---	---	---

(a) Show the contents of the index register after the execution of the instruction:

	I.	NC ]	ΙX		
Index register:					

[1]

(b) Complete the trace table on the opposite page for the following assembly language program.

Selected values from the ASCII character set:

ASCII Code	65	66	67	68	69	70	71	72
Character	A	В	С	D	E	F	G	Н

# Trace table:

In atmostice.	Working	400		Memory	address	3	IV	OUTPUT	
Instruction	space	ACC	90	91	92	93	IX	OUIPUI	
			2	90	55	34	2		
20									
21

24									
25									
26									

Draw a line to match each	n feature with its description.
Feature	Description
Data dictionary	A file or table containing all the details of the database design
	Data design features to ensure the validit of data in the database
Data security	
	A model of what the database will look like although it may not be stored in this way
Data integrity	Methods of protecting the data including the uses of passwords and different access
	rights for different users of the database
	at of data that includes student attendance, qualification and cor p a relational database to store these data. guard against any data loss.
	consider when planning a backup procedure for the data.
Justify your decisions.	
1	

**(c)** The database design has three tables to store the qualifications and grades each student has attained. The following is a sample of the data from each table.

### STUDENT

StudentID	FirstName	LastName	Tutor
001AT	Ahmad	Tan	11A
003JL	Jane	Li	11B
011HJ	Heather	Jones	10A

### QUALIFICATION

QualCode	Level	Subject
CS1	IGCSE	Computer Science
МТ9	IGCSE	Maths
SC12	IGCSE	Science

### STUDENT-QUALIFICATION

QualCode	StudentID	Grade	DateOfAward
SC12	011HJ	А	31/8/2014
SC12	003JL	С	31/8/2014
CS1	003JL	В	31/8/2014

(i) Draw an Entity-Relationship (E-R) diagram to show the relationships between these three tables.

		[2]
(ii)	State the type of relationship that exists between STUDENT and STUDENT-QUALIFICATION.	
		[1]

11)	STUDENT-QUALIFICATION is implemented.
	[2]
(i)	The database will store each student's date of birth.
	Write an SQL script to add a date of birth attribute to the appropriate table.
	[2]
ii)	Write an SQL script to display the <code>StudentID</code> , <code>Grade</code> and <code>DateOfAward</code> for the <code>QualCode</code> value of SC12.
ii)	Write an SQL script to display the FirstName and LastName and QualCode for all STUDENT-QUALIFICATIONs for which the Grade value is A.
	(i)

b)	waves. The table	of connecting devices inc below gives descriptions r	relating to these conne	s, copper cables and ction methods.	
	Tick (✓) one box on each row to show the method that best fits each description.  Description Fibre-optic cable Copper cable Radio waves				
∧/ir	Description eless medium	Fibre-optic cable	Copper cable	Naulo waves	
Γwi	sted-pair is an
