October/November 2021

MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **9** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

| Question | Answer | Marks | | | | | | | | | | | | | | | | | | | | | | | | |
|---|--|-----------|-----|-----|-------------------------|--|---|----------------|---|--|---|--|---|------------------------------|---|---|---------------------|---|---|---------------------------------------|---|--|--------------------------|---|--|---|
| 1 | <p>1 mark for each shaded set of rows</p> <table border="1"> <thead> <tr> <th>Statement</th> <th>RAM</th> <th>ROM</th> </tr> </thead> <tbody> <tr> <td>Stores data permanently</td> <td></td> <td>✓</td> </tr> <tr> <td>It is volatile</td> <td>✓</td> <td></td> </tr> <tr> <td>Stores the start-up instructions for the computer</td> <td></td> <td>✓</td> </tr> <tr> <td>Directly accessed by the CPU</td> <td>✓</td> <td>✓</td> </tr> <tr> <td>Type of main memory</td> <td>✓</td> <td>✓</td> </tr> <tr> <td>Stores currently running applications</td> <td>✓</td> <td></td> </tr> <tr> <td>Can be static or dynamic</td> <td>✓</td> <td></td> </tr> </tbody> </table> | Statement | RAM | ROM | Stores data permanently | | ✓ | It is volatile | ✓ | | Stores the start-up instructions for the computer | | ✓ | Directly accessed by the CPU | ✓ | ✓ | Type of main memory | ✓ | ✓ | Stores currently running applications | ✓ | | Can be static or dynamic | ✓ | | 3 |
| Statement | RAM | ROM | | | | | | | | | | | | | | | | | | | | | | | | |
| Stores data permanently | | ✓ | | | | | | | | | | | | | | | | | | | | | | | | |
| It is volatile | ✓ | | | | | | | | | | | | | | | | | | | | | | | | | |
| Stores the start-up instructions for the computer | | ✓ | | | | | | | | | | | | | | | | | | | | | | | | |
| Directly accessed by the CPU | ✓ | ✓ | | | | | | | | | | | | | | | | | | | | | | | | |

| Stores currently running applications | ✓ | | | | | | | | | | | | | | | | | | | | | | | | | |
| Can be static or dynamic | ✓ | | | | | | | | | | | | | | | | | | | | | | | | | |

| Question | Answer | Marks |
|----------|--|-------|
| 2(a)(i) | 2 bits | 1 |
| 2(a)(ii) | <p>2 marks for correct working, 1 mark for correct answer</p> <p>Working:</p> <ul style="list-style-type: none"> • Pixels is $8 * 8$ • Bytes = $(2 * 8 * 8) / 8 // (2 * 64) / 8$ <p>Answer: 16 (bytes)</p> | 3 |
| 2(b) | <p>1 mark per bullet point to max 2</p> <ul style="list-style-type: none"> • A metafile / wrapper • ...that contains audio and video // ...that contains various different types of data • Describes how the (encoded) data is stored • Is not confined to any one codec / compression method • Synchronises the different types of data (on playback) | 2 |
| 2(c) | <p>1 mark for each correct term</p> <ul style="list-style-type: none"> • Spatial redundancy is when a sequence of consecutive pixels in the same frame have the same value. • Temporal redundancy is when a pixel in the same location in two consecutive frames has the same value. | 2 |

| Question | Answer | Marks |
|----------|---|----------|
| 3(a) | <p>1 mark per bullet point to max 2</p> <ul style="list-style-type: none"> • Cell phone network • Satellite system • Public Switched Telephone Network | 2 |
| 3(b) | <p>1 mark per bullet point to max 2</p> <p>Many correct answers, for example:</p> <ul style="list-style-type: none"> • Server • Router • Gateway • Radio transmitter/receiver //WAP • Hub • Switch • Repeater | 2 |
| 3(c) | <p>1 mark for name and max 2 marks for matching description</p> <p>Parity check</p> <ul style="list-style-type: none"> • Counts if the number of 1s or 0s in each byte is odd or even • Adds a bit to make the number odd or even • Parity is re-calculated at receiving end and a change in parity indicates corruption <p>Echo check</p> <ul style="list-style-type: none"> • Receiver sends data back to sender • Sender compares data received with original • Sender either confirms or resends data <p>Automatic repeat request (ARQ)</p> <ul style="list-style-type: none"> • Uses error detection method to detect errors in individual packets • Sends a negative acknowledgement if an error • Uses timeouts to detect missing packets • Automatically asks for a repeat of the data from the sender | 3 |

| Question | Answer | Marks |
|----------|--|----------|
| 3(d) | <p>1 mark per bullet point to max 2 per security measure, max 4 in total</p> <p>e.g.</p> <ul style="list-style-type: none"> • Firewall • ...denies access to data that does not conform to set rules • ... maintains a blacklist/whitelist of IP addresses • Proxy • ...denies access to data that does not conform to set rules • ... prevents some requests ever reaching the server • Authentication • ... makes use of usernames and strong passwords... • ... without a correct unique combination of characters data on the server cannot be accessed • ... makes use of biometrics ... • ... unique features of individuals that cannot be guessed • ... makes use of two step verification ... • ... a verification code is sent to a mobile phone or other device | 4 |

| Question | Answer | Marks |
|----------|--|----------|
| 4(a)(i) | <p>1 mark per bullet point to max 2</p> <ul style="list-style-type: none"> • Compare instructions • Arithmetic operations • Data movement | 3 |
| 4(a)(ii) | <p>1 mark only from</p> <ul style="list-style-type: none"> • Unconditional and conditional jump instructions • Input and output of data | 1 |
| 4(b) | <p>1 mark per bullet point to max 2 per register, max 6 in total</p> <p>Program Counter</p> <ul style="list-style-type: none"> • Points to the <u>address</u> ... • ... of the <u>next</u> instruction to be fetched • So the address can be transferred to/from the MAR <p>Memory Address Register</p> <ul style="list-style-type: none"> • Points to the address where data to be fetched/stored is located • So data can be transferred to/from the MDR <p>Memory Data Register</p> <ul style="list-style-type: none"> • Holds the data received from/ transmitted to memory • So data can be received from/transmitted to the CIR <p>Current Instruction Register</p> <ul style="list-style-type: none"> • Holds the data received from the MDR • CIR stores the current instruction being processed | 6 |

| Question | Answer | Marks |
|----------|--|----------|
| 5(a) | <p>1 mark per correct word</p> <p>The executable file does not contain the library routines.</p> <p>A DLL file can be edited without having to recompile the calling program.</p> <p>One drawback of a DLL file is that the main program could stop working if the DLL file is corrupted.</p> | 4 |
| 5(b) | <p>1 mark for name, 1 mark per bullet point to max 3 for description</p> <p>Interpreter</p> <ul style="list-style-type: none"> • Converts high level language code into low level code • Translates and runs one line at a time • Stops when an error occurs • Allows errors to be corrected in real time // errors can be corrected and translation continued from that point <p>Compiler</p> <ul style="list-style-type: none"> • Converts high level language code into low level code • Translates the whole program before attempting to run it • Creates an executable file/object code... • ... if there are no errors • Generates a report of all the errors | 4 |
| 5(c) | <p>1 mark per bullet point to max 2</p> <ul style="list-style-type: none"> • Formal / legal recognition of ownership // To protect her intellectual property rights • Formal / legal restrictions on the use of the program | 2 |

| Question | Answer | Marks |
|----------|--|----------|
| 6 | <p>1 mark per bullet point to max 2 per utility program, max 4 in total</p> <p>File compression</p> <ul style="list-style-type: none"> • Reduces the file size • ... by using algorithms to change the data • ... which can be either lossy or lossless <p>Defragmenter</p> <ul style="list-style-type: none"> • Finds files that are split across the disk • ...and moves the blocks that make up each file to be contiguous • Collates free space | 4 |
